

```
1 Lab. match() 실행하기
2
3 1. 다음과 같은 code를 작성후 실행한다.
4 2. 준비물
5     1)Microsoft Visual Studio Code
6     2)Python 3.7 or higher
7     3)filename : matchdemo.py
8
9 3. Code
10 import re
11
12 line = "Cats are smarter than dogs"
13
14 matchObj = re.match( r'(.*) are (.*) .*', line, re.M|re.I)
15
16 if matchObj:
17     print("matchObj.group() : ", matchObj.group())
18     print("matchObj.group(1) : ", matchObj.group(1))
19     print("matchObj.group(2) : ", matchObj.group(2))
20 else:
21     print("No match!!")
22
23 4. 실행결과
24 matchObj.group() : Cats are smarter than dogs
25 matchObj.group(1) : Cats
26 matchObj.group(2) : smarter
```
