```
1  Lab. search() 실행하기
2
3  1. 다음과 같은 code를 작성후 실행한다.
4  2. 준비물
5    1)Microsoft Visual Studio Code
6    2)Python 3.7 or higher
7    3)filename : searchdemo.py
8
9  3. Code
10   import re
11
12   line = "Cats are smarter than dogs"
13
14   searchObj = re.search( r'(.*) are (.*?) .*', line, re.M|re.I)
15
16   if searchObj:
17     print("searchObj.group() : ", searchObj.group())
18     print("searchObj.group(1) : ", searchObj.group(1))
19     print("searchObj.group(2) : ", searchObj.group(2))
20   else:
21     print("No match!!")
22
23  4. 실행결과
24    searchObj.group() :  Cats are smarter than dogs
25    searchObj.group(1) :  Cats
26    searchObj.group(2) :  smarter
```
